

TRAIL CAMERA PROJECT

Discover your WILD neighbors with the Living with Lions Trail Camera Project

The Living with Lions Trail Camera Project collects visual data of mountain lions and other wildlife from trail cameras placed on properties throughout the North Bay, aiding in our understanding of overall wildlife densities and distribution in the region.

See wildlife on your property!

With a trail camera on your property, you help us...

- 🐾 Estimate densities of collared and uncollared mountain lions and other wildlife
- 🐾 Document presence or absence of wildlife based on habitat type
- 🐾 Engage our community's interest in our wild neighbors

The images collected on your property help us understand the ecology in our region and knowing our wild neighbors can inspire us all to take steps to coexist with them!
